

Waste Management Report 2023

Overview

Sisterna's waste management initiatives in 2023 focused on reducing waste generation, enhancing recycling practices, and exploring sustainable packaging options. This report outlines the goals we achieved in 2023 and our future objectives.

Our packaging

Boxes:	- Carton box:	1400 g: Produced of 95% recycled material
	- Plastic bag:	120 g polyethylene: Non recycled material
Tins:	- Carton box:	140 g
	- Tin:	1190 g tin-free steel
Drums:	- Drum:	20.5 kg steel

Following recycling information is given on product labelling.

Box	Bag	Pallet	Wrapping film
			

2023 Achievements

Digital Christmas Cards: By sending our Christmas cards digitally instead of through traditional postal methods, we eliminated the need for paper and reduced the carbon footprint associated with transport.

Environmentally Friendly Packaging: Whenever we needed new packaging, we prioritized the selection of environmentally friendly options, contributing to our sustainability goals.

Future Goals

100% Sustainable Packaging by 2028: We aim to ensure that all packaging used in our operations is sustainable by 2028. This involves a thorough review of current packaging materials and the adoption of alternatives that are eco-friendly.

Improved Sample Packaging: We plan to enhance the sustainability of our personal care sample packaging. This will involve reducing the environmental impact of these materials while maintaining the quality and integrity of our products.

Conclusion

Sisterna is dedicated to continuous improvement in waste management and sustainability. By implementing these policies and striving to achieve our future goals, we contribute to a healthier environment and align our operations with global sustainability standards. We look forward to reporting further progress in the coming years.
